START HERE

Before You Start: Requirements

DigitalForge Pro runs entirely in your web browser. There is nothing to install, no software to download, and no server to set up. You need four things to get started.

1. A Modern Web Browser

Open any of the four HTML tool files in any modern browser. All four tools are fully tested and supported on:

Browser	Status
Google Chrome	Recommended
Apple Safari	Fully supported
Microsoft Edge	Fully supported
Mozilla Firefox	Fully supported
Opera / Brave	Supported
Internet Explorer	Not supported

2. An Internet Connection

Three of the four tools require an active internet connection — two to call the Claude AI API and one to open your chosen AI image tool in a new tab:

Tool	Internet Required?
Prompt Generator	Yes — for generation
Listing Generator	Yes — for generation
Prompt Player	Yes — to open AI tool
Resize Tool	No — fully offline

3. A Claude API Key — Most Important

The Prompt Generator and Listing Generator use Anthropic's Claude AI to generate content. You need your own free Claude API key. Takes about 2 minutes to set up.

HOW TO GET YOUR FREE CLAUDE API KEY

- 1. Go to **console.anthropic.com** in your browser
- 2. Click **Sign Up** and create a free Anthropic account
- 3. Verify your email address
- 4. Go to **API Keys** in the left sidebar
- 5. Click **Create Key** — give it any name (e.g. "DigitalForge Pro")
- 6. Copy the key — it starts with **sk-ant-api03-**
- 7. Open the Prompt Generator or Listing Generator
- 8. Paste your key into the API Key panel at the top of the tool
- 9. Click **Save Key** — your key is stored securely in your browser

⚠ IMPORTANT

Copy your API key immediately after creating it. Anthropic only shows it once. If you lose it, you will need to create a new one — which is quick and free.

✓ GOOD TO KNOW — ONE-TIME SETUP PER TOOL

You will save your Claude API key **twice** — once in the Prompt Generator and once in the Listing Generator. This is a one-time setup. After saving, the key persists in that tool across all future sessions. The Prompt Player and Resize Tool do not need an API key. Each tool stores its key separately because browsers isolate local files for your security — your key never crosses between tools or leaves your machine.

HOW MUCH DOES THE CLAUDE API COST?

The Claude API is pay-per-use with no monthly minimums. Costs are very low for typical use:

Action	Approximate Cost
Generate 10 to 50 prompts (Prompt Generator)	~\$0.002 — less than half a cent
Generate 1 listing (Listing Generator)	~\$0.01 — one cent per listing
Generate 20 listings for a collection	~\$0.20 — twenty cents
Generate 100 listings (full shop launch)	~\$1.00 — one dollar
Generate 394 listings (full 18 series)	~\$4.00 — four dollars total

Add a small credit balance to your Anthropic account to get started. **\$5 will comfortably cover generating listings for your entire shop.** You can set usage limits and alerts at console.anthropic.com to make sure you never spend more than you intend.

4. An AI Image Generation Tool (Optional)

The Prompt Generator creates prompts and the Prompt Player opens your chosen AI tool. You need an account on at least one AI image tool. All of the following are supported:

AI Tool	Website
Midjourney	midjourney.com
Nano Banana Pro	nanobananaapro.com
Adobe Firefly	firefly.adobe.com
DALL-E	chatgpt.com
Stable Diffusion	stability.ai
Leonardo.ai	app.leonardo.ai
Ideogram	ideogram.ai
Recraft	recraft.ai
Canva AI	canva.com

✓ GOOD TO KNOW

The Resize Tool and the non-generation parts of all tools work completely without any AI image tool. You only need an AI image tool if you are generating new artwork. If you already have your images, just use the Resize Tool and Listing Generator.

Requirements Summary

Requirement	Details
Modern browser	Chrome, Safari, Edge, Firefox
Internet connection	Required for Prompt Gen + Listing Gen
Claude API key	Free account at console.anthropic.com
Anthropic credit	Add \$5 to get started
AI image tool	Any from the supported list above
Upscayl	Free image upscaler at upscayl.org
Photopea	Free browser image editor at photopea.com

SECTION 1

Product Overview

DigitalForge Pro is a complete, ready-to-use automation toolkit for creating, generating, resizing, and listing digital products on any platform — fully powered by AI. **Built by a real digital product seller, for digital product sellers.**

If you want to build a passive income digital shop but hate the idea of writing hundreds of listing descriptions, generating dozens of image prompts, and manually resizing every file — this toolkit does it all for you. You bring the creative ideas. The toolkit handles everything else.

What Is Included

Tool	What It Does
Prompt Generator	Describe any collection idea and instantly generate 20 professional AI prompts across 12 niches. Exports CSV.
Prompt Player	Load your CSV and work through each prompt one by one in your AI tool. Tracks progress, marks done.
Listing Generator	Generates complete listings — SEO title, full description, 13 tags, Pinterest caption — for any niche. CSV export.
Resize Tool	Drag-and-drop resizer. Creates all output sizes and ZIPs automatically. Runs entirely in your browser.
This Workflow Guide	Step-by-step guide covering the entire process from idea to live listing. PDF format.

Supported Niches — 12 Categories

01 Art Prints	02 SVG Cut Files	03 Planners & Templates
04 Canva Templates	05 Clipart & Graphics	06 Invitations & Stationery
07 Worksheets & Educational	08 Fonts & Typography	09 Photography Presets
10 Printable Wall Quotes	11 Digital Stickers	12 Mockup Templates

SECTION 2

Key Selling Points

"Go from zero to 20 live listings in a single weekend — without writing a single description by hand."

01

Everything Is Already Built

No setup, no coding, no complicated software. Open the HTML files in any browser and they work instantly.

02

Powered by Claude AI

Listings are written by Anthropic's Claude — the most capable AI writing model available. Not a cheap wrapper.

03

Built by a Real Seller

Every feature exists because it solved a real problem. Tag character limits, bulk upload CSV formats, file size limits — all handled.

04

Tag Validation Built In

Etsy enforces a 20-character tag limit. Every generated tag is automatically validated before export — no rejected tags.

05

One Tool Feeds the Next

Prompt Generator → Prompt Player → Listing Generator → Resize Tool. One connected pipeline, not disconnected apps.

06

Bilingual Out of the Box

Every listing includes a Spanish section automatically. Opens your shop to Spanish-speaking buyers worldwide.

07

Pinterest Captions Included

Every listing generation also produces a ready-to-post Pinterest caption. Social media marketing is built in.

08

Free Updates Forever

Every future version update is free for life. Gumroad notifies you automatically when a new version drops.

09

Scales Infinitely

No cap on collections, products, or listings. The toolkit was used to build 394 listings across 18 series.

10

One-Time Purchase

No subscription, no monthly fees, no per-listing charges. Buy once, use forever for unlimited collections.

AT A GLANCE

The DigitalForge Pro Workflow

The four tools work as a connected pipeline. Each tool's output feeds the next. The Claude API and your chosen AI image tool are called as needed.

TOOL 1 Prompt Generator

INPUT Your niche selection + a one-line collection idea (you describe it)
CALLS **Claude API** Generates 10 to 50 prompts written for your chosen image tool
OUTPUT **Prompts CSV** downloads to your computer

**TOOL 2** Prompt Player

INPUT **Prompts CSV** from Tool 1
CALLS **AI image tool** (Midjourney, Firefly, Leonardo.ai, etc.) — opens it with each prompt ready to paste
OUTPUT **Master images** you generate and download from the AI tool

**TOOL 3** Resize Tool

INPUT **Master images** from Tool 2 (drag and drop)
CALLS No external service — runs fully offline in your browser, DPI metadata embedded
OUTPUT **Sized image ZIPs** for every size your niche needs

**TOOL 4** Listing Generator

INPUT Your collection name + price (you enter)
CALLS **Claude API** Generates title, description, 13 tags, Pinterest caption per listing
OUTPUT **Listing CSV** with one row per product

FINAL STEP — UPLOAD TO YOUR MARKETPLACE

Etsy · Gumroad · Shopify · or your platform of choice

Paste from the Listing CSV and upload the Sized image ZIPs from Tool 3

SECTION 3

Complete Workflow Guide

RECOMMENDED FREE TOOLS

Upscayl (image upscaling) · Photopea (browser-based image editor) · Vela (Etsy bulk upload) · Pinterest (free marketing) · any supported AI image tool (Midjourney, Firefly, Leonardo.ai, Ideogram, Recraft, and others)

PHASE 1

Plan Your Collection

Before generating anything, decide what collection you want to create.

STEP 1 — CHOOSE YOUR COLLECTION THEME

1. Decide on a theme — nursery art, landscapes, botanicals, SVG cut files, planners, stickers, etc.
2. Name your collection (e.g. The Garden Collection, Summer SVG Bundle, Weekly Planner Suite)
3. Choose your niche from the 12 available categories in the Prompt Generator
4. Decide orientation — portrait 3:4 for most art prints, landscape 4:3 for scenics, square for social
5. Set your target product count — 10 to 40 is ideal for a collection
6. Set your price — see the Pricing Reference in Section 6

STEP 2 — IDENTIFY YOUR TARGET BUYER

- New parents decorating a nursery
- Baby shower or gift buyers
- Interior design enthusiasts
- Craft enthusiasts (SVG)
- Teachers and homeschool parents
- iPad journal and planner community
- Photographers and bloggers (presets)
- Small business owners (Canva templates)

The more specific your target buyer, the stronger your SEO. **"Ladybug nursery art for baby girl room"** outperforms generic **"nursery art"** every time.

PHASE
2

Generate AI Prompts

Use the Prompt Generator to create professional AI image prompts or design briefs.

STEP 3 — OPEN THE PROMPT GENERATOR

1. Open **DigitalForge_PromptGenerator.html** in Chrome or Safari
2. Click your niche tab from the 12 available categories
3. Enter your collection name in the Collection Name field
4. Write a detailed description of your vision in the description box
5. Select your style, orientation, number of prompts, and price
6. Click **Generate** — Claude AI writes all prompts in under 60 seconds
7. Review prompts — each has a title, full prompt text, and selling angle
8. Click **Download CSV for Prompt Player** to save your file

STEP 4 — AUTO-ADD TO LISTING GENERATOR (OPTIONAL)

1. Scroll down to the Auto-Add section in the Prompt Generator
2. Click **Load Listing Generator HTML** and select your listing generator file
3. Click **Add Collection to Generator**
4. Download the updated file and replace your old listing generator
5. Your new collection now appears as a new tab automatically

PHASE
3

Generate Your Images

Use the Prompt Player to work through each prompt in your AI image tool.

STEP 5 — OPEN THE PROMPT PLAYER

1. Open **DigitalForge_PromptPlayer.html** in your browser
2. Drop your CSV file from Step 3 into the upload zone
3. Select your AI tool — Midjourney, Nano Banana Pro, Adobe Firefly, DALL-E, Stable Diffusion, Leonardo.ai, Ideogram, Recraft, or Canva
4. For each prompt: click Copy Prompt, click Open in Tool, paste and generate, click Done
5. Use Skip to bypass prompts you do not want to use
6. The progress grid shows done, pending, and skipped at a glance
7. You can stop and resume at any time — progress is tracked automatically

STEP 6 — UPSCALE YOUR IMAGES

1. Download Upscayl free at **upscayl.org**
2. Select all downloaded PNG files
3. Choose the Real-ESRGAN model
4. Set scale to 4x — sufficient quality, faster than 6x
5. Click **Upscale All** — runs automatically in batch

Why upscale? AI tools typically output at around 1000–1500px. Print quality requires 300 DPI minimum. Upscaling bridges the gap between AI output size and print-ready quality.

PHASE 4

Upscale and Prepare

Use Photopea (free browser editor at photopea.com) to prepare your master files.

STEP 7 — CROP AND SET DPI IN PHOTOPEA

1. Open your upscaled PNG in Photopea at **photopea.com** — no download needed
2. Press **C** to activate the Crop tool
3. Set ratio to 3:4 for portrait, 4:3 for landscape, 1:1 for square
4. Center your composition and press Enter
5. Go to **Image** → **Image Size** → UNCHECK Resample → set DPI to 300 → OK
6. File → Export As → PNG
7. Save as **CollectionName_PrintName_MASTER-300dpi.png**

✓ TIP

Always save your master PNG at 300 DPI before running through the Resize Tool. This ensures all output files are print-shop ready at the correct resolution.

PHASE 5

Resize and Package

Use the Resize Tool to create all output sizes and ZIP files automatically.

STEP 8 — OPEN THE RESIZE TOOL

1. Open **DigitalForge_ResizeTool.html** in your browser — no server required
2. Select your output preset matching your niche (Art Prints, Planners, SVG, etc.)
3. Check or uncheck individual sizes as needed
4. Select JPG or PNG output format and quality level
5. Choose **Fit Mode** — Contain (no crop, pad with white) or Cover (auto-crop to fill) — see callout below
6. Choose ZIP grouping — two ZIPs (US + ISO) recommended for art prints
7. Drag and drop your master PNG into the upload zone
8. Click **Process** — all sizes are created and ZIPs are built automatically
9. Download ZIP 1 and ZIP 2 to your output folder
10. Repeat for every product in your collection

Fit Mode choice matters. When you resize a 2:3 master to a different ratio (4:5, 5:7, 11:14, ISO A-series), the source and target aspect ratios do not match. **Cover** crops the image (typically from the top/bottom) to fill the new ratio with no padding — best for art prints with centered subjects. **Contain** keeps every pixel and adds white padding to fill the ratio — best when image content cannot be cropped. **Compose masters with subject in the central 80%** so center-cropping at any ratio preserves the subject.

For art prints, **ZIP 1** contains US sizes (5x7, 8x10, 11x14, 12x16, 16x20) and **ZIP 2** contains ISO sizes (A4, A3). Both ZIPs upload to your listing as digital download files.

PHASE 6

Generate Listings

Use the Listing Generator to create complete SEO-optimized listings for your entire collection.

STEP 9 — OPEN THE LISTING GENERATOR

1. Open **DigitalForge_ListingGenerator.html** in your browser
2. Click **+ Add Collection** in the sidebar
3. Enter collection name, choose niche, add product names one per line
4. Click **Create Collection** — your collection tab appears in the sidebar
5. Set your shop name, style, target buyer, primary keyword, and price
6. Review the product list — click Skip on any products you want to exclude
7. Click **Generate All Listings** — Claude AI writes every listing automatically
8. Review generated listings — expand any to check title, description, and tags
9. Click **CSV** to export your listings file

STEP 10 — REVIEW YOUR TAGS

1. Tags over the platform limit are highlighted in red automatically
2. The generator uses a library of 92 pre-verified platform-safe tags
3. If any red tags appear, regenerate that listing individually
4. Verify all 13 tags are present and within the character limit before exporting

⚠ IMPORTANT

Etsy strictly enforces a 20-character maximum per tag. Any tag over this limit will be rejected. The generator validates automatically, but always review before uploading.

PHASE 7

Upload to Your Platform

Use your platform's bulk upload tool to publish all listings efficiently.

STEP 11 — BULK UPLOAD WITH VELA (FOR ETSY)

1. Go to **getvela.com** and connect your shop
2. Click **Listings** → **Import** → **Import from CSV**
3. Upload your CSV from Step 9
4. Map columns: Title, Description, All Tags
5. Bulk edit: Category, Price, Quantity (999), Type (Digital), Renewal (Automatic)
6. Upload ZIP files and listing photos directly in Vela
7. Click **Publish** to push all listings live simultaneously

✓ TIP

Vela handles ZIP file upload, listing photos, tags, price, quantity, category, and publishing all in one place. You only need to switch to your platform to verify listings are live.

PHASE
8

Market Your Shop

Use Pinterest to drive free organic traffic to your listings.

STEP 12 — SET UP PINTEREST

1. Go to **pinterest.com** and create a business account
2. Set your business name to match your shop name
3. Create boards matching your collection themes
4. Connect your shop under Settings → Claimed Accounts

STEP 13 — PIN YOUR LISTINGS DAILY

1. Go to **Create** → **Create Pin**
2. Upload your listing photo
3. Title: use your listing title
4. Description: paste the Pinterest caption from your listing generator export
5. Add hashtags at the bottom of the description
6. Destination link: paste your listing URL
7. Click **Publish**

Pinterest Pinning Schedule

When to Pin	What to Do
Daily minimum	Pin 1 to 3 new listings per day
Best times	Evenings 8–11pm and Saturday/Sunday mornings
First 30 days	Pin every product individually — each one is a day of content
After 30 days	Repin best performers and add new collection content
Ongoing	1 pin per day = 365 pins per year = compounding organic traffic

Pinterest pins keep driving traffic for months and years after you post them. Unlike social media where posts die in 24 hours, **a Pinterest pin can send buyers to your shop for years — completely passively.**

SECTION 4

Editing Your Tools

Any of the four HTML tools can be uploaded to Claude AI and edited at any time. No coding knowledge is required — just describe what you want changed in plain English.

How to Edit a Tool

1. Start a new conversation at **claude.ai**
2. Upload the HTML file you want to edit (drag and drop or click to attach)
3. Describe what you want changed in plain English
4. Claude edits the file and gives you a new version to download
5. Replace your old file with the new downloaded version

What You Can Ask Claude to Change

Request Type	Example
Add a new collection	Add a collection called Autumn SVG Bundle with 20 designs
Fix a bug	The CSV export is not including tags correctly
Change style or colors	Make the header dark green instead of navy
Add a new feature	Add a reset button to clear all generated listings
Update content	Change the default price for art prints to \$5.99
Add a new size	Add 24x36 inch size to the US art print ZIP

Give Claude Context When Editing

Claude's memory resets between conversations. Start each editing session by sharing your shop name, niche, product types, pricing, any tag rules, and what the tool currently does versus what you want changed.

✓ YOU OWN THIS

Your tools are plain HTML files you own completely. There are no subscriptions, no lock-in, and no dependency on any service other than the Claude API for generation features. You can edit them freely at any time.

🐛 FOUND A BUG?

Email **bugfix@digitalforgepro.ai** with the tool name, your niche, and what happened. Buyers who report confirmed bugs get a thank-you credit by name in the Version History of the release that fixes it.

SECTION 5

Quick Reference

Complete Workflow at a Glance

Step	Action
1	Choose theme, niche, price, target buyer
2	Generate AI prompts — up to 50 per run
3	Generate images one by one
4	Upscale PNG files 4x
5	Crop to ratio and set 300 DPI
6	Create all sizes and ZIP files
7	Generate SEO titles, descriptions, tags
8	Bulk publish all listings
9	Pin daily to Pinterest

Recommended Free Tools

Tool	What For
Upscayl	Upscale AI images 4x for print quality
Photopea	Crop images and set 300 DPI in browser
Vela	Bulk upload listings to Etsy
Pinterest	Free organic traffic to your listings
Canva	Create listing mockup photos
Gumroad	Sell DigitalForge Pro itself

SECTION 6

Pricing Reference

Product Type	Suggested Price
Character nursery art	\$3.99
Fine art landscapes	\$4.99
Premium botanical art	\$5.99
SVG cut files — single	\$1.99 – \$3.99
SVG cut files — bundle	\$5.99 – \$9.99
Planner pages	\$3.99 – \$5.99
Planner bundles	\$7.99 – \$12.99
Canva templates — single	\$3.99 – \$5.99
Canva templates — pack	\$9.99 – \$19.99
Digital stickers — sheet	\$2.99 – \$4.99
Digital stickers — bundle	\$5.99 – \$9.99
Printable wall quotes	\$2.99 – \$4.99
Invitations	\$4.99 – \$7.99
Worksheets — single	\$1.99 – \$3.99
Worksheet bundles	\$4.99 – \$9.99
Photography presets	\$7.99 – \$19.99
Mockup templates	\$4.99 – \$9.99
Font — single	\$5.99 – \$9.99
Font bundle	\$14.99 – \$24.99

These are suggested starting prices based on current Etsy market research. Test your own pricing by checking what your top competitors charge for similar products. **Adjust up or down based on your niche competition and product quality.**

DIGITALFORGE PRO

Now go build something.

Your passive income shop is waiting.

digitalforgepro.ai

DIGITALFORGE PRO · v1.0

APPENDIX

Version History

This page lists every release of DigitalForge Pro, newest first. When a new version ships, this page is updated and the entire toolkit is re-delivered to all previous buyers at no charge.

v1.0 Initial Release

MAY 2026

TOOLS INCLUDED

- **Prompt Generator** — 12 niche presets, generates 10 to 50 prompts per run, exports to CSV, supports 9 AI image tools
- **Prompt Player** — CSV import, progress tracking, auto-launches your chosen AI tool
- **Listing Generator** — SEO-optimized titles, bilingual descriptions (English + Spanish), 13 validated tags, Pinterest captions
- **Resize Tool** — multi-file batch processing, 11 print-ready presets, DPI metadata embedded for print platforms, ZIP output, runs fully offline

DOCUMENTATION

- **Workflow Guide PDF** — 19-page step-by-step guide covering the full 8-phase pipeline from idea to live listing, with at-a-glance workflow diagram
- **Brand Email Setup PDF** — free 15-page bonus, walks you through setting up support@yourdomain.com using Gmail SMTP, with the upgrade path to Google Workspace

NICHES SUPPORTED

- Art Prints, SVG Cut Files, Planners, Canva Templates, Clipart, Invitations, Worksheets, Fonts, Photo Presets, Wall Quotes, Digital Stickers, Mockup Templates

FREE UPDATES FOREVER

Every future version of DigitalForge Pro is delivered to v1.0 buyers automatically at no additional cost. The price increases to **\$97 at v2.0** for new buyers — but you locked in **\$67 forever**.
